SERVICES

Colleges Providing Screening Services

Opioid Overdose Prevention and Reversal

90%

of health centers provide students with educational and preventative information about opioid overdose.

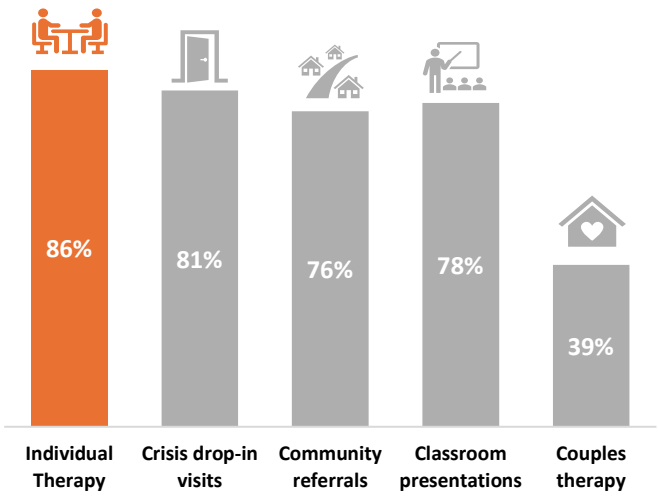

88%

provide information about the availability and location of opioid overdose reversal medication.

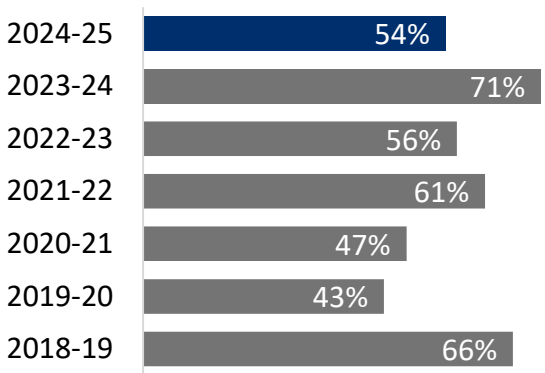

90%

distribute federally approved opioid overdose reversal medication obtained through the Naloxone Distribution Project.

Individual therapy was the most frequently provided mental health service.

Colleges Offering a Mental Health Counseling Training Program in Past Year

About the Survey

Since 2008, HSACCC has surveyed its members in California community colleges. Survey results have been used to:

- Inform HSACCC members annually of program/service trends;
- Inform advocacy related to student health funding, fees, and infrastructure; and
- Enhance community college health research.

Where provided, prior-year data illustrates general trends. Year-to-year comparisons should be interpreted cautiously because participating colleges and available funding vary by year.
